Industrial Internship Report on

" PRANISHA Food Delivery Application"

Prepared by

[Isha Ipsita]

Executive Summary
This report provides details of the Industrial Internship provided by upskill Campus and The IoT Academy in collaboration with Industrial Partner UniConverge Technologies Pvt Ltd (UCT). This internship was focused on a project/problem statement provided by UCT. We had to finish the project including the report in 6 weeks' time. My project was to develop a Food Delivery Application named "PRANISHA" using Java Swing and MySQL. The application includes features like login/signup system, food categories, add to cart, payment system, and order tracking. This internship gave me a very good opportunity to get exposure to Industrial problems and design/implement solution for that. It was an overall great experience to have this internship.

TABLE OF CONTENTS

1 Preface

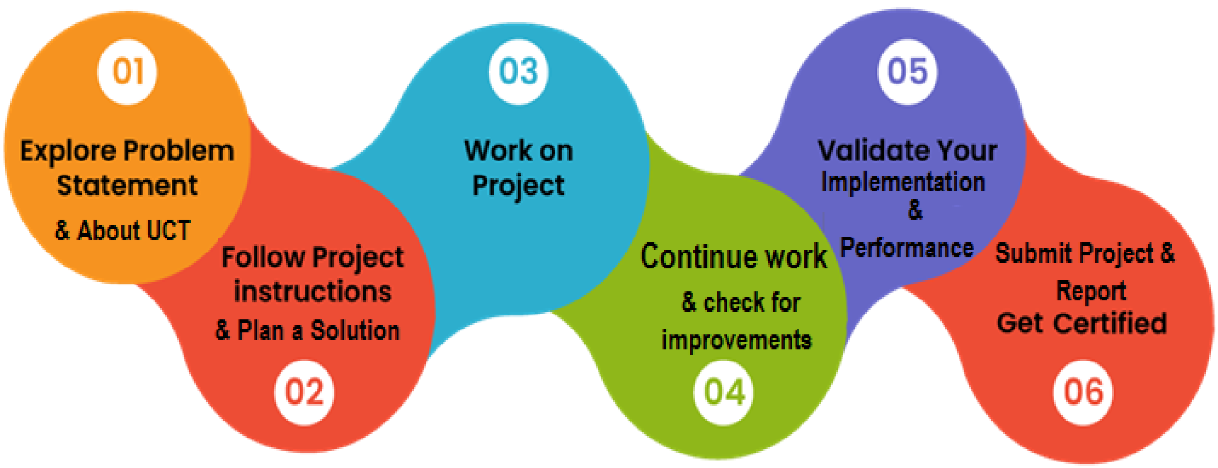
This report summarizes my 6 weeks internship work completed under upskill Campus and UCT.

During this internship, I worked on a project "PRANISHA Food Delivery Application". The objective was to design a desktop-based application that simulates real-world food delivery systems.

This internship helped me understand practical application development, problem solving, and real-world workflows.

I would like to thank my mentors and upskill Campus for providing this opportunity.

Overall, this internship was a valuable learning experience



2 Introduction

2.1 About UniConverge Technologies Pvt Ltd

A company established in 2013 and working in Digital Transformation domain and providing Industrial solutions with prime focus on sustainability and RoI.

For developing its products and solutions it is leveraging various Cutting Edge Technologies e.g. Internet of Things (IoT), Cyber Security, Cloud computing (AWS, Azure), Machine Learning, Communication Technologies (4G/5G/LoRaWAN), Java Full Stack, Python, Front end etc.

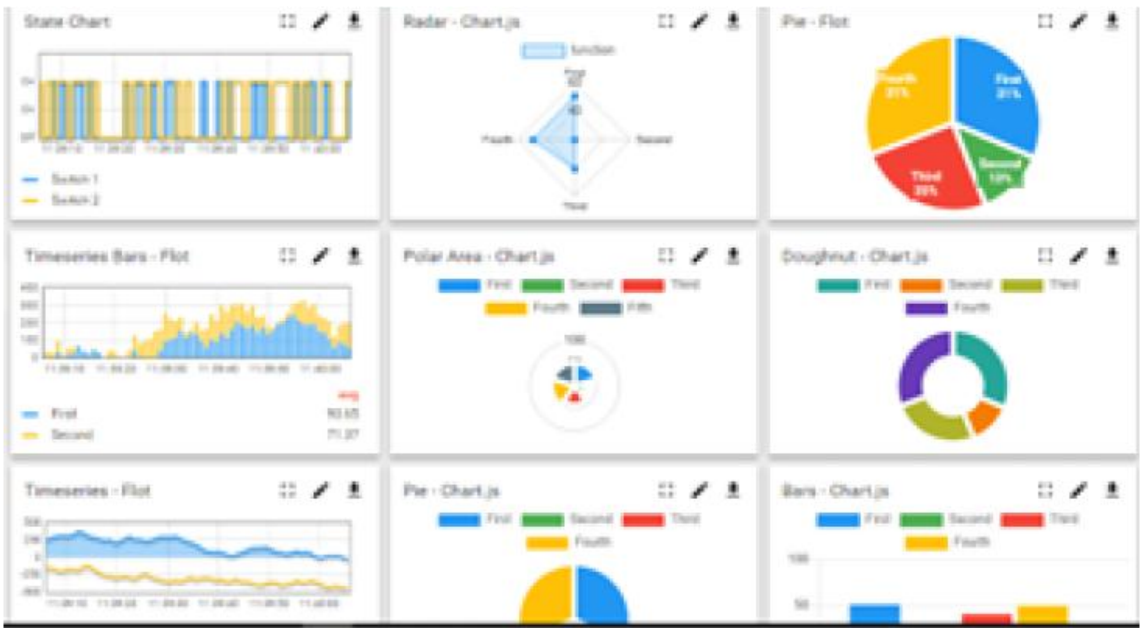
i. UCT IoT Platform (uct Insight)

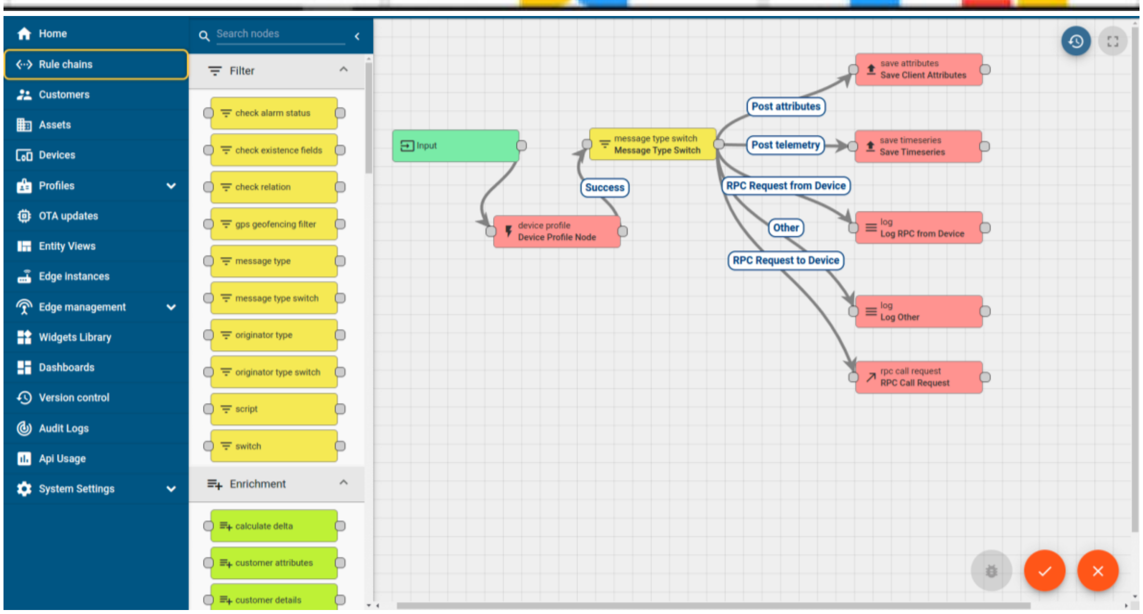
UCT Insight is an IOT platform designed for quick deployment of IOT applications on the same time providing valuable "insight" for your process/business. It has been built in Java for backend and ReactJS for Front end. It has support for MySQL and various NoSql Databases.

- **It enables device connectivity via industry standard IoT protocols - MQTT, CoAP, HTTP, Modbus TCP, OPC UA**
- **It supports both cloud and on-premises deployments.**

It has features to

- **Build Your own dashboard**
- **Analytics and Reporting**
- **Alert and Notification**
- **Integration with third party application(Power BI, SAP, ERP)**
- **Rule Engine**





ii. Smart Factory Platform (FACTORY WATCH)

Factory watch is a platform for smart factory needs.

It provides Users/ Factory

- **with a scalable solution for their Production and asset monitoring**
- **OEE and predictive maintenance solution scaling up to digital twin for your assets.**
- **to unleased the true potential of the data that their machines are generating and helps to identify the KPIs and also improve them.**
- **A modular architecture that allows users to choose the service that they what to start and then can scale to more complex solutions as per their demands.**

Its unique SaaS model helps users to save time, cost and money.

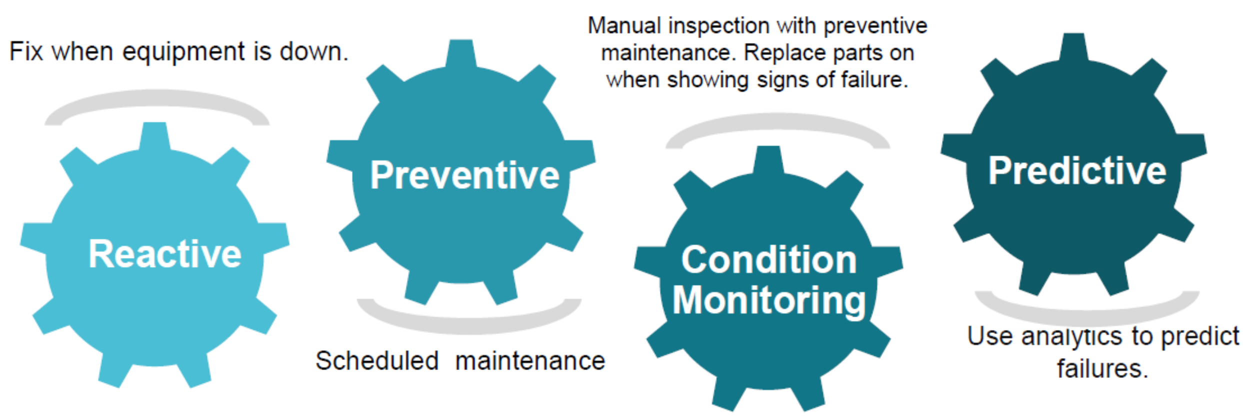
Machine	Operator	Work Order ID	Job ID	Job Performance	Job Progress		Output		Rejection	Time (mins)				Job Status	End Customer
					Start Time	End Time	Planned	Actual		Setup	Pred	Downtime	Idle		
CNC_S7_81	Operator 1	WO0405200001	4168	58%	10:30 AM		55	41	0	80	215	0	45	In Progress	i
CNC_S7_81	Operator 1	WO0405200001	4168	58%	10:30 AM		55	41	0	80	215	0	45	In Progress	i

iii. LoRaWAN based Solution

UCT is one of the early adopters of LoRAWAN teschnology and providing solution in Agritech, Smart cities, Industrial Monitoring, Smart Street Light, Smart Water/ Gas/ Electricity metering solutions etc.

iv. Predictive Maintenance

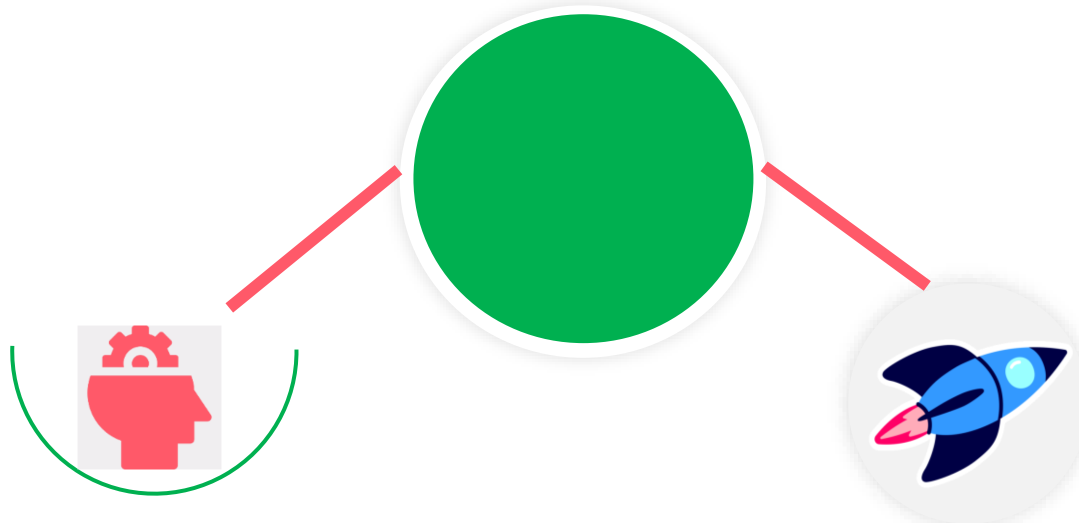
UCT is providing Industrial Machine health monitoring and Predictive maintenance solution leveraging Embedded system, Industrial IoT and Machine Learning Technologies by finding Remaining useful life time of various Machines used in production process.



2.2 About upskill Campus (USC)

upskill Campus along with The IoT Academy and in association with Uniconverge technologies has facilitated the smooth execution of the complete internship process.

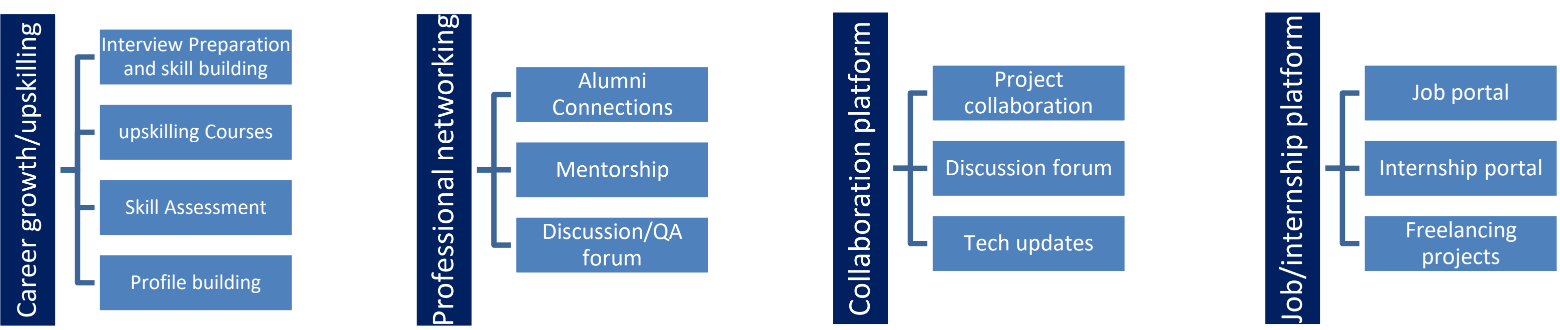
USC is a career development platform that delivers personalized executive coaching in a more affordable, scalable and measurable way.



Seeing need of upskilling in self paced manner along-with additional support services e.g. Internship, projects, interaction with Industry experts, Career growth Services

upSkill Campus aiming to upskill 1 million learners in next 5 year

https://www.upskillcampus.com/



2.2 The IoT Academy

The IoT academy is EdTech Division of UCT that is running long executive certification programs in collaboration with EICT Academy, IITK, IITR and IITG in multiple domains.

2.3 Objectives of this Internship program

The objective for this internship program was to

- ☛ **get practical experience of working in the industry.**
- ☛ **to solve real world problems.**
- ☛ **to have improved job prospects.**
- ☛ **to have Improved understanding of our field and its applications.**
- ☛ **to have Personal growth like better communication and problem solving**

2.4 Reference

1. Java Swing Documentation

2. MySQL Documentation

3. Oracle Java Tutorials

4. GitHub Repository

5. IntelliJ IDEA IDE

2.5 Glossary

Terms	**Acronym**
GUI	**Graphical User Interface**
MySQL	**Relational Database Management System**

Java Swing	Java GUI toolkit used for desktop application development
Authentication	Process of verifying user identity
CRUD	Create, Read, Update, Delete operations

3. Problem Statement

In the assigned problem statement

- **The problem was to design and develop a Food Delivery Application that allows users to browse food items, add them to cart, and place orders with a proper payment system.**
- **The system should be user-friendly and simulate real-world applications like Swiggy and Zomato.**

4. Existing and Proposed solution

Existing solutions like Swiggy and Zomato provide food delivery services but are complex and require internet connectivity.

My proposed solution is a simplified desktop-based application that demonstrates the core functionality such as login, food selection, cart management, payment UI, and order tracking.

This project helps beginners understand how real-world applications are designed.

2.5 Code submission (Github link)

2.6 Report submission (Github link) : first make placeholder, copy the link.

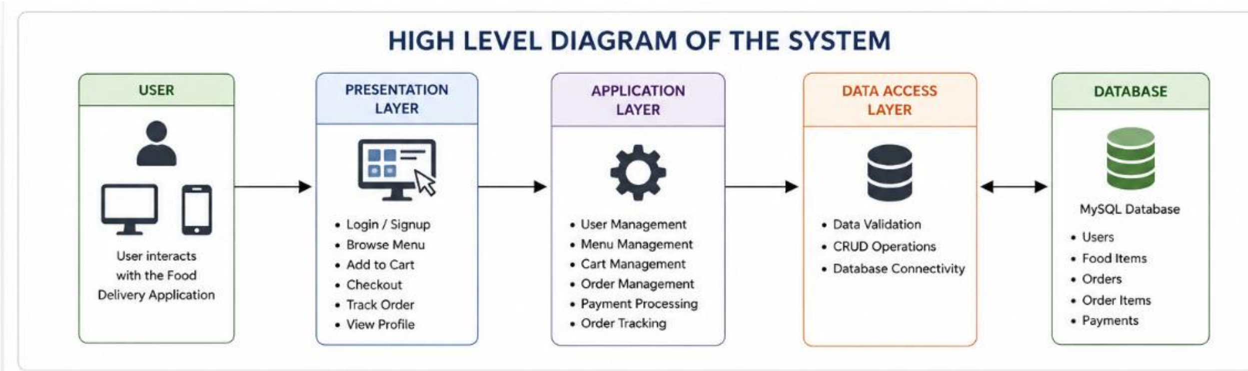
Proposed Design/ Model

The system consists of multiple modules such as Login Module, Home Menu, Cart System, Payment Module, and Order Tracking.

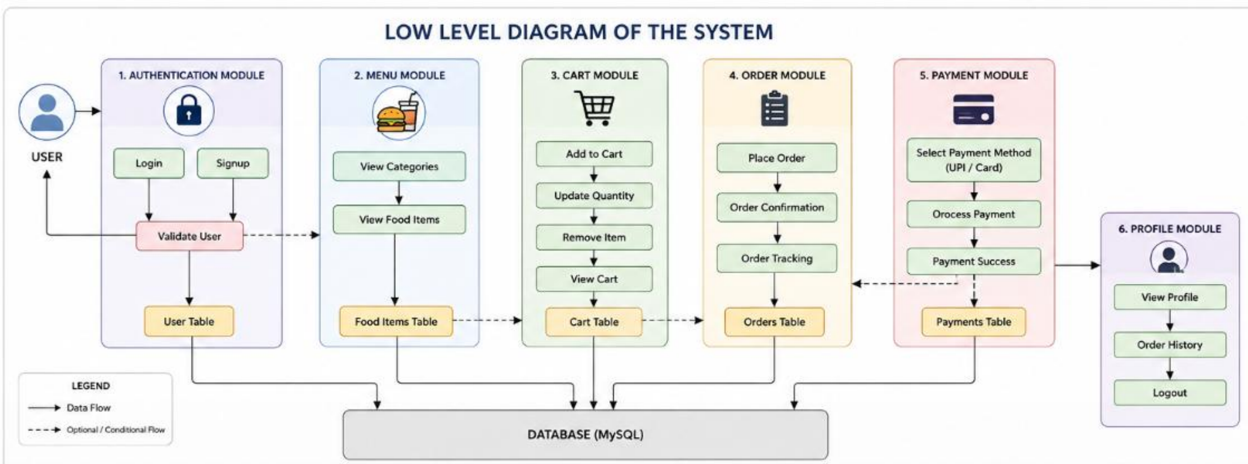
User logs in → selects food → adds to cart → enters address → makes payment → order is confirmed.

This flow represents a simplified version of a real food delivery system.

2.7 High Level Diagram (if applicable)



Low Level Diagram (if applicable)



Performance Test

The system was tested for usability and performance.

It works efficiently for small datasets and provides quick response for user actions.

Limitations include lack of real-time database and online payment integration.

My learnings

• Learned Java Swing GUI development

• Understood MySQL database connectivity

• Gained experience in building real-world applications

• Improved problem-solving and debugging skills

Future work scope

In future, the application can be enhanced by adding online payment gateway, real-time order tracking with maps, and mobile app support.

More features like notifications and user profiles can also be added.
